

Eminds Electrochemical Processing Methodologies and Corrosion Protection for Device and System Miniaturization

Dr. Laetitia Philippe,

Empa, Materials Science and Technology

Feuerwerkerstrasse 39, 3602 Thun, Laetitia.Philippe@empa.ch

Abstract

In this talk, I will present you the action COST Eminds.

I will describe the fundamental objectives of the actions which are to support and promote high-quality research in electrochemical processing technologies and corrosion towards the development of miniaturized systems and devices.

Networking tools offered by the COST framework, such as meetings, training schools, exploitation of Short Term Scientific Missions, establishment of an ESR Think Tank, special outreach activities for women, and coordination of structured dissemination activities towards academia, industry and the general public is the main actions taken in order to reach our goals.

Finally, I will try to explain what the impact of the COST actions is and what the main users of these tools are.
